3. MAINTENANCE

XONYX™ solid surface is finished with a silky smooth surface finish. XONYX™ is a durable material that will last for years with simple care.

Follow the recommendations below to properly clean the XONYX™ solid surface product.

3.1 PREVENTING DAMAGE

Some chemicals are not compatible with solid surface materials and could permanently harm the surface beyond repair. Avoid surface contact with;

- Detergents that contain alcohol
- Strong acids
- Acetons. Etc.

If surfaces are exposed to these chemicals, we recommend promptly to clean the surface with plenty of water and detergent to avoid the permanent stains.

Not to cause permanent pigment residues avoid using colored detergents or high coloring powder products such as;

- Nail varnish.
- Hair dyes.
- Self tanning products or oil based products (hair oil and conditioner, etc.)
- Do not use cleaning items with metal wires.
- Do not cut on a solid surface to avoid scratches.
- Avoid subjecting solid surface to extreme hot temperatures or heat generating objects.
- Avoid dropping heavy and/or sharp objects on solid surface.

3.2 EVERYDAY CARE

XONYX™ products are easy to clean and maintain.

It is sufficient to clean with dishwashing soap, warm water and a soft non-abrasive sponge or microfiber cloth.

Widely used household detergents can also be used to remove most of the dirt and stains that appear on the surface with usage.

In case of limescale residue occurrence using descaling agent with a microfiber cloth or sponge is recommended. If the residue deposits appear to be tough, let the descaling objective slightly longer on the surface no more than 5 minutes, rinse with hot water and dry with a soft microfiber cloth.

For possible coloring substance residues, use slightly abrasive detergent with soft microfiber cloth or sponge.

If the stains appear to be persistent repeat the process with slightly abrasive sponges.

The above simple steps will ensure the original satin finish, acclaimed feature of XONYX™, will keep in its original condition with silky smooth finish.

3. HOOLDUS

XONYX™ solid surface on v siidise pinnaviimistlustega.

XONYX™ on vastupidav materjal, mis isegi vähese hoolduse korral peab vastu aastaid.

Järgige palun allolevaid soovitusi, et XONYX™ kivimassist toodet nõuetekohaselt puhastada.

3.1 KAHJUSTUSTE VÄLTIMINE

Mõned kemikaalid ei sobi solid surface-tüüpi materjalidega ning võivad pinda püsivalt ja parandamatul kahjustada.

Vältige pinna kokkupuudet järgmiste ainetega:

- alkoholi sisaldavad puhastusvahendid
- tugevad happed
- atsetoonid, jne.

Kui pind puutub kokku nende kemikaalidega, soovitame püsivate plekkide vältimiseks pind kiirelt puhastada rohke vee ja pesuvahendiga.

Püsivate pigmendimuutuste ennetamiseks ärge kasutage värvilisi pesuvahendeid või suure värvimisvõimega tooteid nagu:

- küünelakk
- juuksevärvid
- isepruunistavad tooted või õlipõhised tooted (juukseõli ja palsam, jne)
- Ärge kasutage metalltraadiga puhastustarvikuid.
- Kiirmustuste vältimiseks ärge löigake pinnal midagi.
- Vältige pinna kokkupuudet äärmuslikult kuumu temperatuuri või soojust tekitavate esemetega
- Vältige raskete ja/või teravate esemete kukkumist pinnale.

3.2 IGAPÄEVE NE HOOLDUS

XONYX™ tooteid on lihtne puhastada ja hooldada.

Igapäe vesel puhastamisel kasutage nõudepesuseepi, sooja vett ja pehmet mitteabrasiivset käсна või mikrokiudlappi.

Kasutuse käigus pinnale tekkiva mustuse ja plekkide eemaldamiseks saab kasutada ka levinud majapidamises kasutatavaid puhastusaineid.

Katlakivi jääkide korral on soovitatav kasutada katlakivieemaldusvahendit koos mikrokiudlapi või käsnaga. Kui jäägid tunduvad olevat tõrksad, jätke katlakivieemaldusaine pinnale veidi kauemaks, kuid mitte rohkem kui 5 minutiks, loputage kuumu veega ja kuivatage pehme mikrokiud lapiga.

Võimalike värvainete jääkide eemaldamiseks kasutage pehme mikrokiudlapiga või käsnaga kergelt abrasiivset puhastusvahendit.

Kui plekid tunduvad tõrksad, korra ke toimingut kergelt abrasiivsete käsnadega.

Ülaltoodud lihtsad sammud tagavad, et algne satiinne pinna viimistlus mis on XONYX™-ile omane, säilitab oma algse siidiselt sileda viimistluse.
